Augmented.City

ISMAR 2026

October 5 - 9, Bari, Italy

The 25th International Symposium on Mixed and Augmented Reality

IEEE IEEE COMPUTER SOCIETY IEEE VGTC

Augmented City VPS

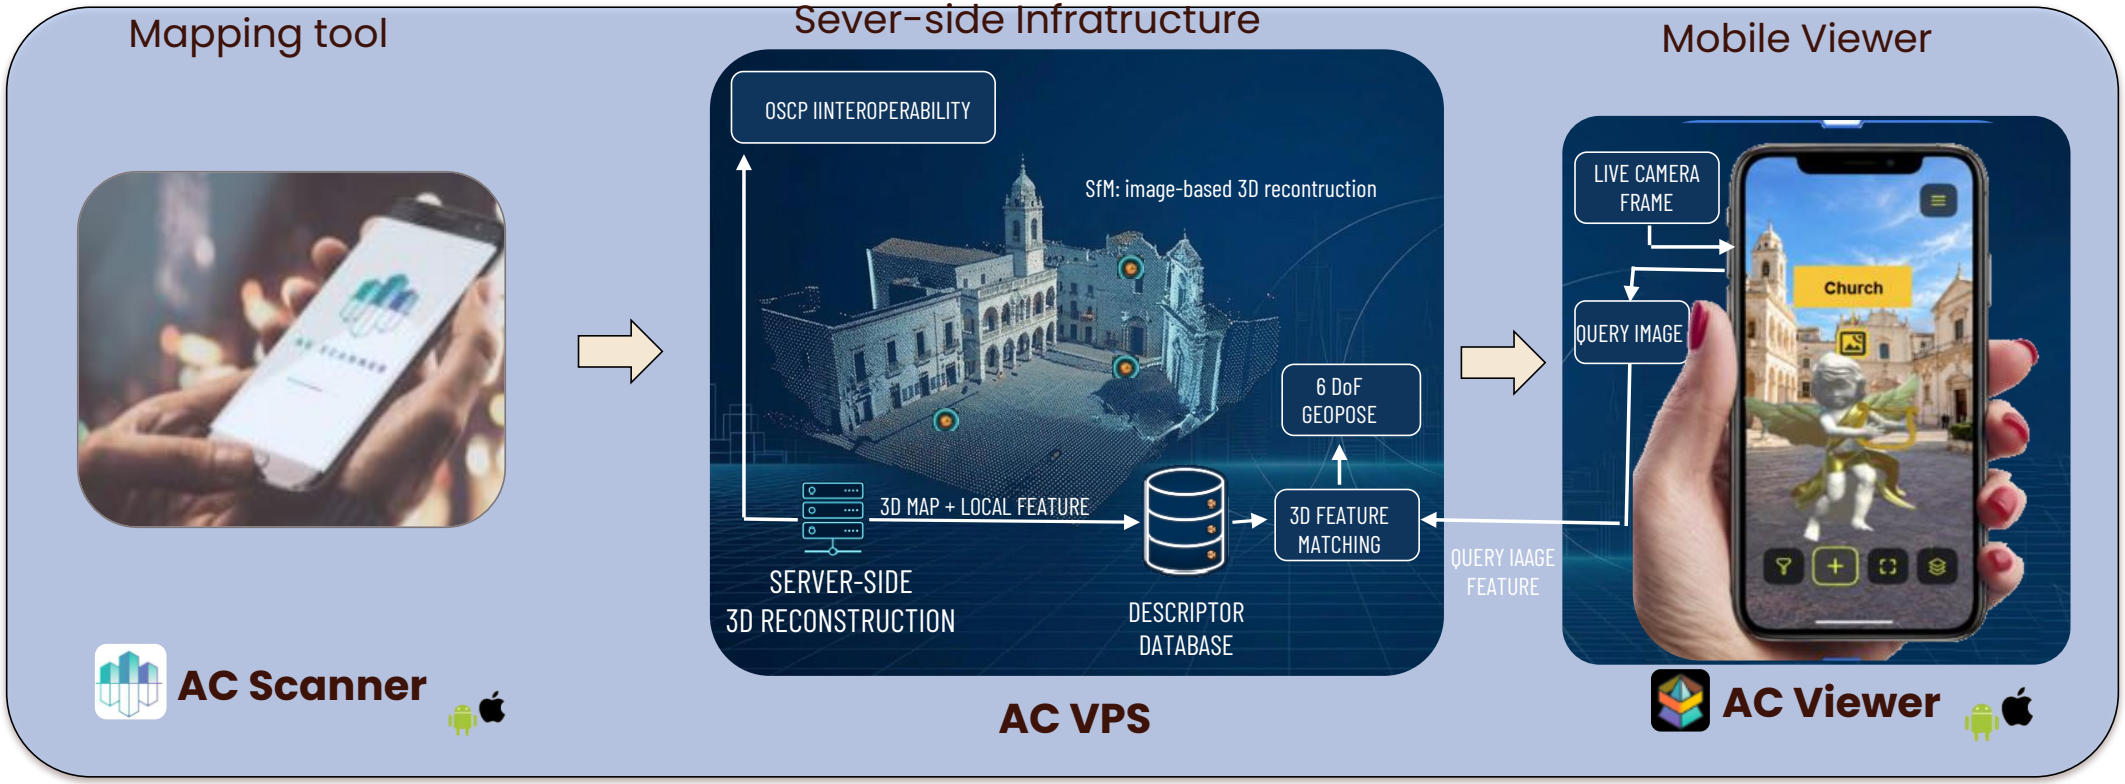

Augmented.City

AC Platform

A suite of apps designed to work with GEOPose-based Augmented Reality

3 apps to support the workflow:

- ***AC Scanner*** - mobile mapping and data capture for outdoor (any size of location from a small site to a city scale) and indoor
- ***Management System*** - Map-based georeferencing and digital-twin/content management
- ***AC Viewer*** - mobile AR visualization and interaction

Augmented City VPS

Augmented.City

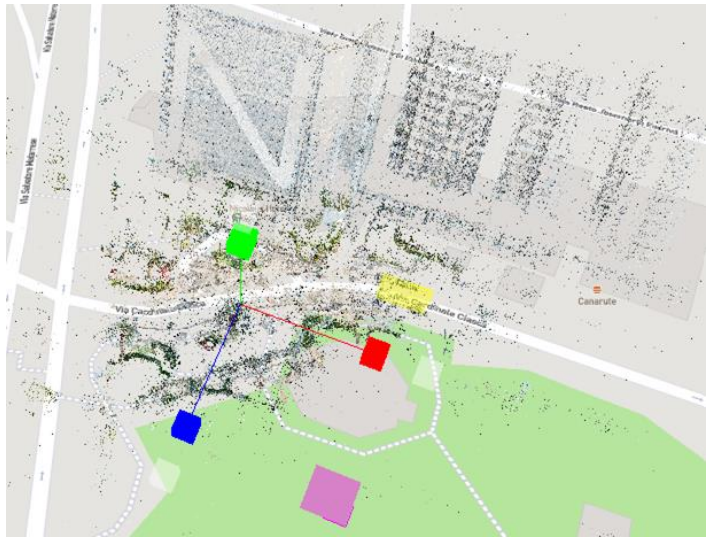

Key Components:

- **Smartphone Mapping** — Creation of 3D point clouds from *standard smartphones* using SfM algorithms; *no LiDAR or specialized hardware required*.
- **Visual Localization** — Fast localization using ***proprietary computer-vision algorithms*** to locate the query image within the 3D Point Cloud and estimate the camera pose.
- **Spatial Content Placement** — Accurate placement and real-time interaction with virtual content *on-site across different devices or remotely*.

Augmented City VPS

Key Technical Features

- Mapping via **any smartphone**, processing and storage on cloud server
- No size limit for Point Clouds
- Full processing on the server, **no need to download point clouds to the device**

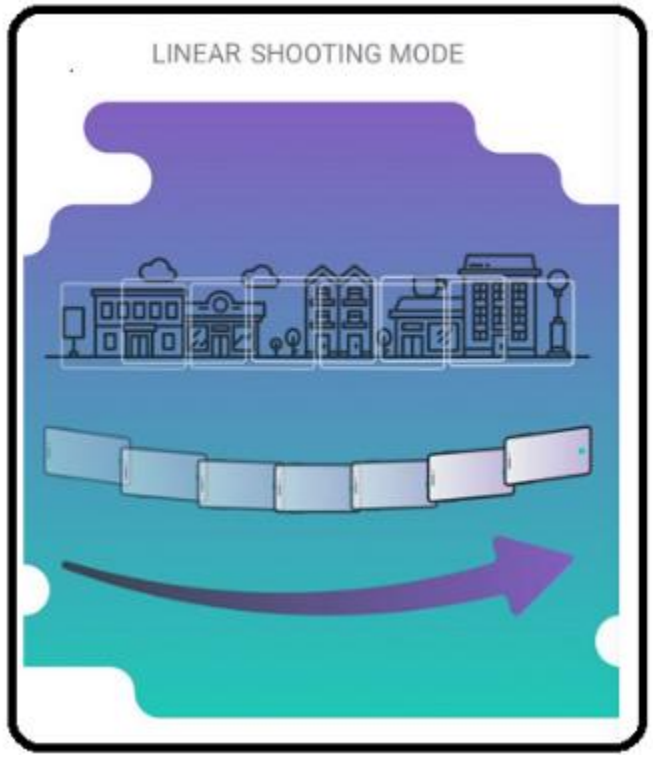

- **Automatic Point Cloud Merging**
- Works in all weather conditions and brightness changes, offers a localization accuracy of 10-30 cm
- Highly robust solution, supports up to **75% of scene change**
- Ultra-fast localization (less than 0.1 sec on the server)
- **Support for OGC GeoPose 2.0 protocol**
- Rating system and educational toolbox

AC Scanner - Mapping Procedure

How to create a 3D map (Digital twin) of a real-world location

LINEAR scanning

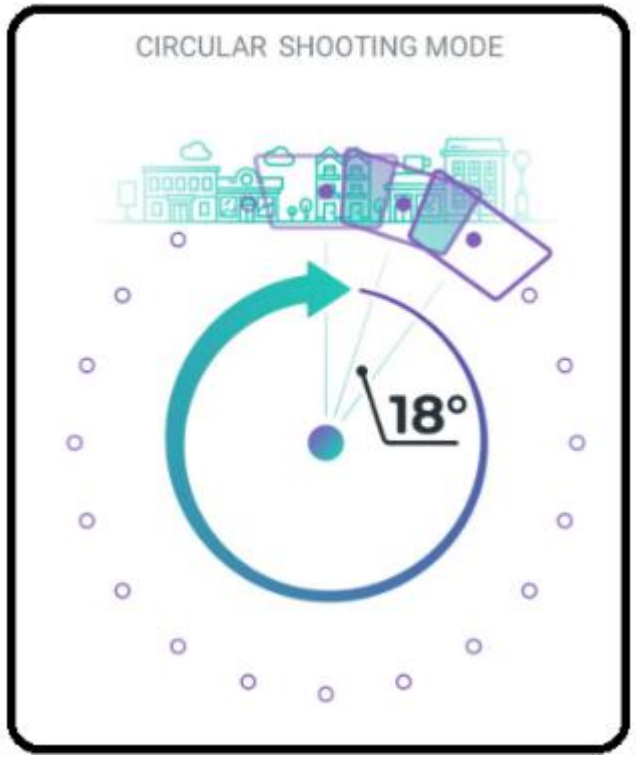

CALIBRATION passage automatically create a *Point Cloud with real-world dimensions*.

AC Scanner – Mapping Procedure

Augmented.City

CIRCULAR scanning

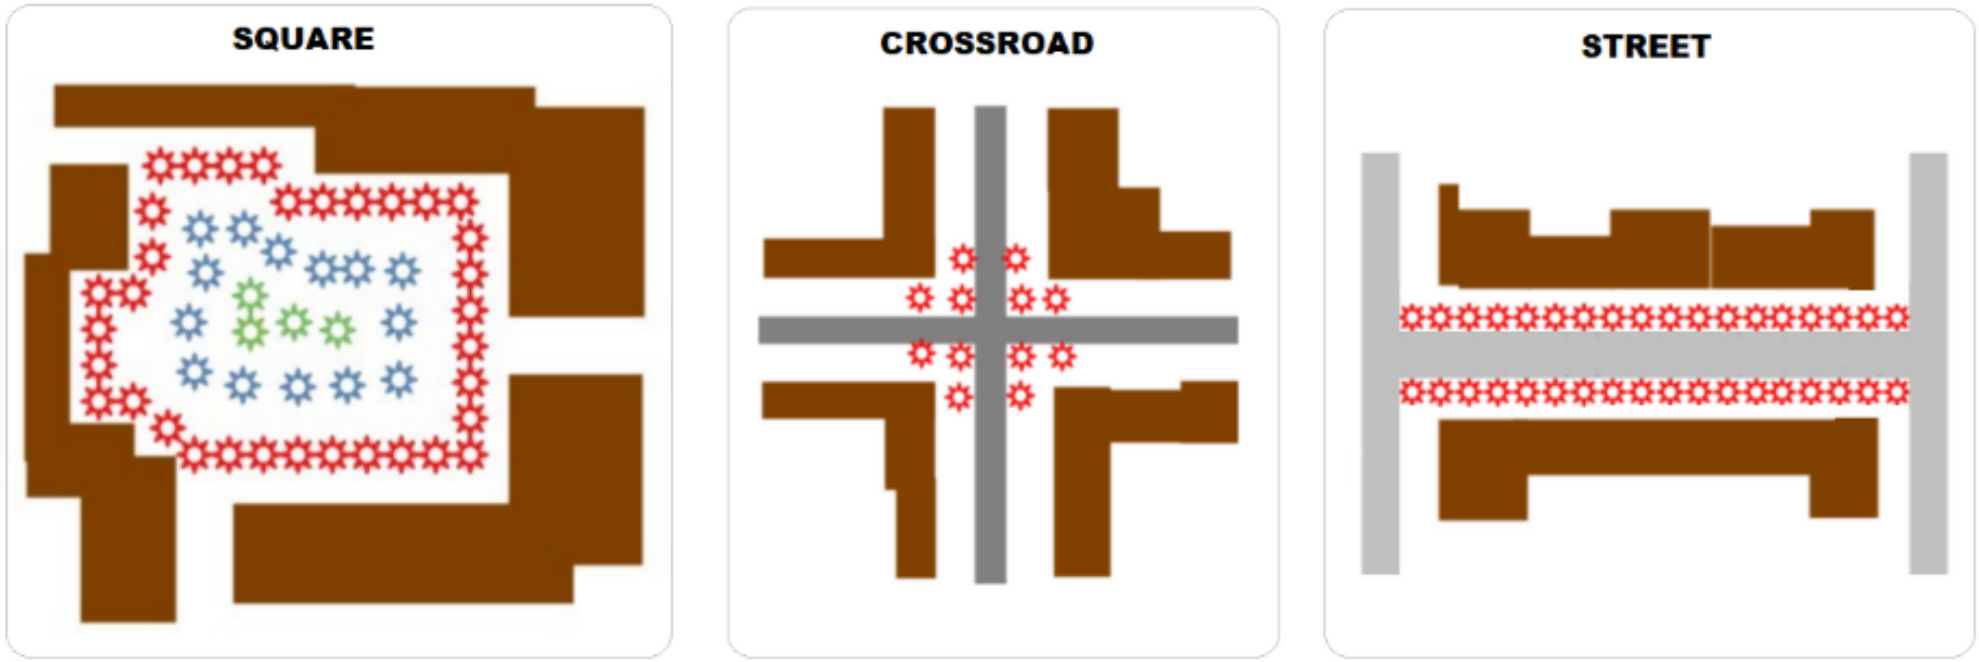

Scan points at the same distance from the reference facade.

AC Scanner – Mapping Procedure

Augmented.City

Mapping Approaches for Different Area Types

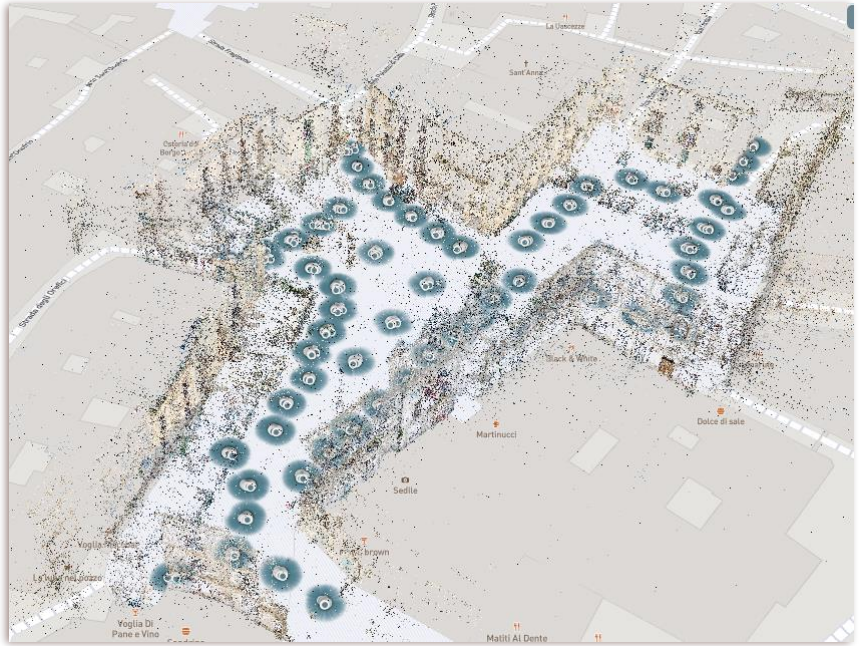

- point at 5 meters from the facade
- point at 10-15 meters from the facade
- point at more then 15 meters from the facade

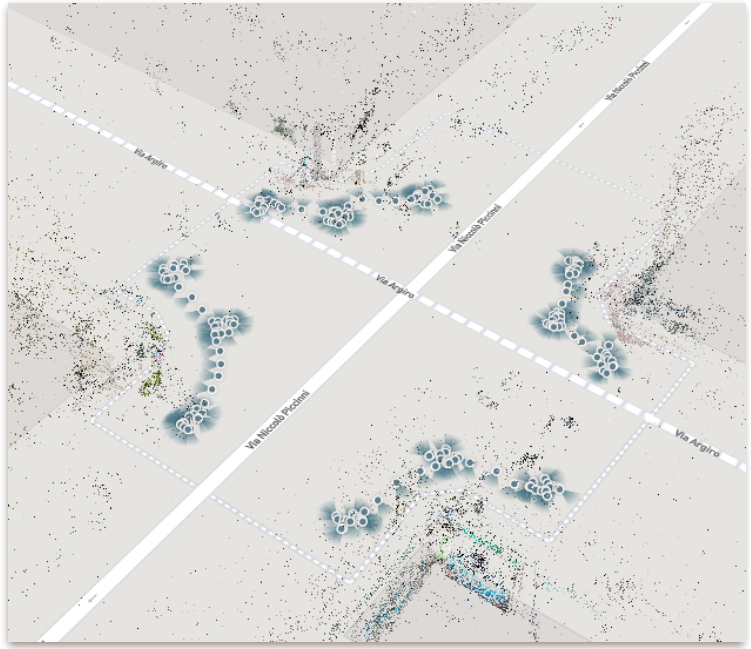

AC Scanner – Mapping Procedure

Augmented.City

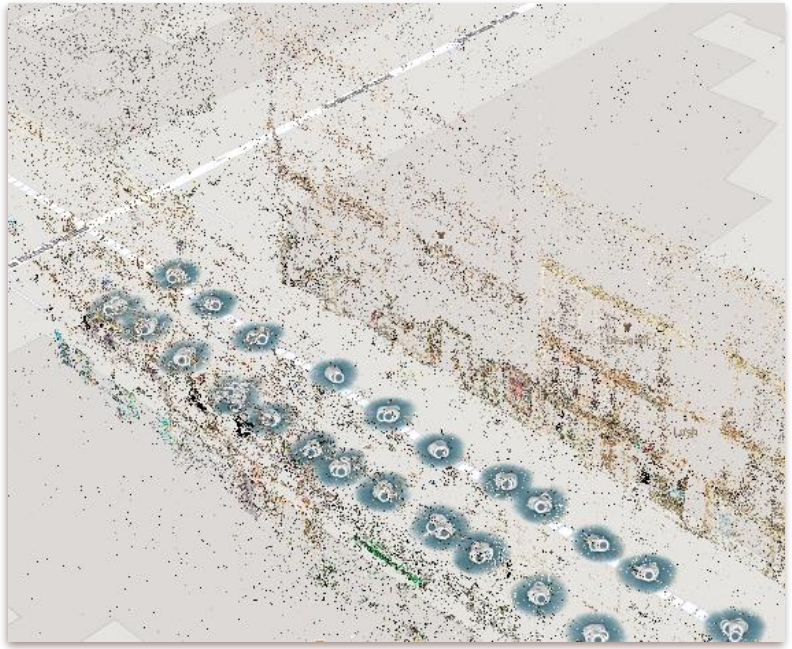

Mapping result for different Area Types: **3D Point Cloud & camera pose**

square

cross

street

AC Scanner – Spatial Mapping

Some Examples of our 3D Point Clouds – in 230 cities in the world

Outdoor and indoor scanned locations

Pisa

Acireale

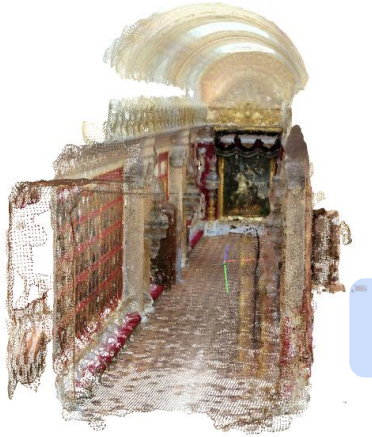

Public indoor space

Bari

Sanremo

A Picture Gallery indoor space
